ABSTRACT

The principle point of building up this framework is to give plasma to the people affected with Covid-19 who need plasma in order to survive . The quantity of people who need plasma are expanding in huge number. Utilizing this framework client can seek plasma accessible in the city and he can likewise get contact number of the benefactor who has a similar blood assemble he needs. Keeping in mind the end goal to help individuals who need plasma, this Online Plasma Donation administration framework can be utilized viably to get the points of interest of accessible plasma gatherings and client can likewise get contact number of the blood benefactors having a similar plasma gathering and inside a similar city. So if the plasma isn't accessible in the plasma donation center client can ask for the contributor to give the blood to him and spare somebody life. Utilizing this administration framework individuals can enroll himself or herself who like to give plasma. To enlist in the framework they need to enter their contact data like location versatile number and so forth.

This plasma donation administration framework is an online site so it is effectively accessible to everybody. At the point when a person need to give blood he need to enlist to the framework. Benefactor enlistment is simple, to get enlist to the framework he need to top off enrolment shape. Then enrolment shape he can make username and secret key. Benefactor need to give data like plasma gathering, contact points of interest and so forth contributor can likewise change his record data when he needs utilizing his username and secret word.

Utilizing this blood donation framework individuals can look plasma aggregate accessible which they are required. They check it web based utilizing our plasma donation administration site. In the event that on the off chance that blood amass isn't accessible in plasma donation center, they can likewise get contact quantities of the people who has a similar blood assemble he is require. Also, he can ask for the

individual to give the blood for sparing somebody life. Our framework additionally enable client to look online the individual who have a similar blood bunch he needs and on the off chance that he discover the If he discover a benefactor in his city then we give him all points of interest of the contributor, on off chances that he doesn't discover any giver then he is given the contact numbers and addresses of the Life Saving Contact Persons for enormous urban communities.

INTRODUCTION

Problem Identification:

Many people are suffering a loss in many different ways due to Covid-19 pandemic .People affected with Covid-19 are unable to find a perfect way to search for the plasma donor.

Scope:

In this project we create a web-application where-in we create a plasma donation portal for people affected with Covid-19. Using this portal, Covid-19 affected people can find a matching plasma donor helping them save their lives.

Objective:

Our objective is to help Covid-19 affected patients to find a plasma donor in order to save their lives.

Limitations:

In this project, we are blindly believing the details given by the user. We are not asking for proof to validate whether the given details are correct.

System Analysis:

Existing System:

Blood donation management portal was present before COVID pandemic. In those kinds of portal, users will be able to donate and search for the blood.

Proposed System:

We built up this framework is to help with providing plasma to the people affected with Covid-19 who need plasma in order to survive . The quantity of people who need plasma are expanding in huge number. Utilizing this framework client can seek plasma accessible in the city and he can likewise get contact number of the benefactor who has a similar blood assemble he needs. Keeping in mind the end goal to help individuals who need plasma, this Online Plasma Donation administration framework can be utilized viably to get the points of interest of accessible plasma gatherings and client can likewise get contact number of the blood benefactors having a similar plasma gathering and inside a similar city. So if the plasma isn't accessible in the plasma donation center client can ask for the contributor to give the blood to him and spare someone's life.

Requirements Specifications:

Software Requirements:

Operating System	: Windows 7 and above
User Interface	: HTML
Programming Language	: PHP
Database	: MySQL
Web Server	: Tomcat-Apache

Hardware Requirements:

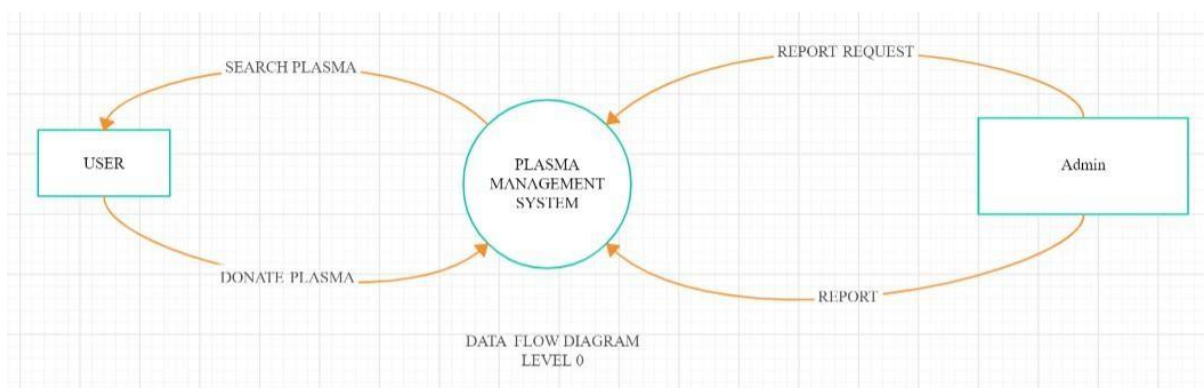

- **Processor :** intel i3 and above
- **Monitor:** 1080x1020
- **Keyboard**
- **Mouse**
- **Hard Disk :** 10GB minimum
- **RAM :** 256MB or more

System Implementation:

Module Description:

Become a Donor:

In this module, users can register themselves to become a donor . Before getting registered as a donor, user will be asked about the details to check whether he/she is eligible for donating plasma .After satisfying the eligibility criteria, details of the user will be collected and added to the database .

Search a donor:

In this module, user will be able to search for the plasma which matches their requirements.

Contact Us:

In this module, user can ask a query to the admin by entering their details like E-mail Id, Phone no. and the query. User can do this without even registering in the portal.

Admin:

In this module, admin will be able to change their password, add a donor, view the list of donors, view the queries place by users in contact us page, and can manage why become donor and about page.

Convalescent Plasma Therapy

The procedure is safe and that a plasma donor can donate again and again, three or four times.

- Plasma donation does not harm the donor. It carries the same risk as blood transfusion.
- The donation happens between compatible donor and recipient.
- Donors can donate more than once, based on their physical condition.
- Plasma therapy can be repeated, should the recipient not show a good response. The plasma from another donor could be tried the second time.

THE PROCESS

Donating plasma is similar to giving blood. A needle is placed into a vein in your arm. Plasma is collected through a process called plasmapheresis and is conducted in cycles that may take up to an hour. Whole blood is drawn. The plasma is separated from the red blood cells and other cellular components. These are returned to your body with sterile saline solution to help the body replace the plasma removed from the whole blood.

Become a donor

About Us Page:

A screenshot of a web browser displaying the 'About' page of a 'Plasma Management System'. The browser address bar shows 'localhost/wp%20project/project%20plasma%20donation/About.php'. The page has a dark header with the title 'Plasma Management System' and navigation links: Home, Admin, About, Why Become Donor, Become a Donor, Search Blood, Contact Us. The main content area has a heading 'About' followed by two paragraphs of text. To the right is a red graphic of two hands holding a heart with the text 'Save a life Give Blood'.

About

The main aim of developing this system is to provide blood to the people who are in need of blood. The number of persons who are in need of blood are increasing in large number day by day. Using this system user can search blood group available in the city and he can also get contact number of the donor who has the same blood group he needs.

In order to help people who are in need of blood, this Online Blood Bank management system can be used effectively for getting the details of available blood groups and user can also get contact number of the blood donors having the same blood group and within the same city. So if the blood group is not available in the blood bank user can request the donor to donate the blood to him and save someone life. Using this bank management system people can register himself or herself who want to donate blood. To register in the system they have to enter their contact information like address mobile number etc.

A red graphic featuring two hands cupping a heart, with the text 'Save a life Give Blood' in bold red letters.

Why Become a Donor page:

A screenshot of a web browser displaying the 'Why Become a Donor' page of the 'Plasma Management System'. The browser address bar shows 'localhost/wp%20project/project%20plasma%20donation/whybecomedonor.php'. The page has a dark header with the title 'Plasma Management System' and navigation links: Home, Admin, About, Why Become Donor, Become a Donor, Search Blood, Contact Us. The main content area has a heading 'Why Become a Donor' followed by two paragraphs of text. Below the text is a list of 'Surprising Health Benefits of Donating Blood'. To the right is a photograph of a person's arm with a blood donation needle inserted.

Why Become a Donor

Blood is the most precious gift that anyone can give to another person the gift of life. A decision to donate your blood can save a life, or even several if your blood is separated into its components red cells, platelets and plasma which can be used individually for patients with specific conditions.

Double Red Blood Cells are most needed by patients after significant blood loss through trauma, surgery, or anemia. Platelets help prevent uncontrolled bleeding and help patients with cancer, leukemia, and blood disorders. Plasma helps replace lost fluids and other blood products in burn victims, and more.

Surprising Health Benefits of Donating Blood

- Giving blood can reveal potential health problems
- Giving blood can reduce harmful iron stores
- Giving blood may lower your risk of suffering a heart attack
- Giving blood may reduce your risk of developing cancer
- Giving blood can help your liver stay healthy
- Giving blood can help your mental state

A photograph showing a person's arm with a blood donation needle inserted into a vein. The person is wearing a blue sleeve, and the needle is connected to a tube.

Checking whether a person is eligible to give plasma or not:

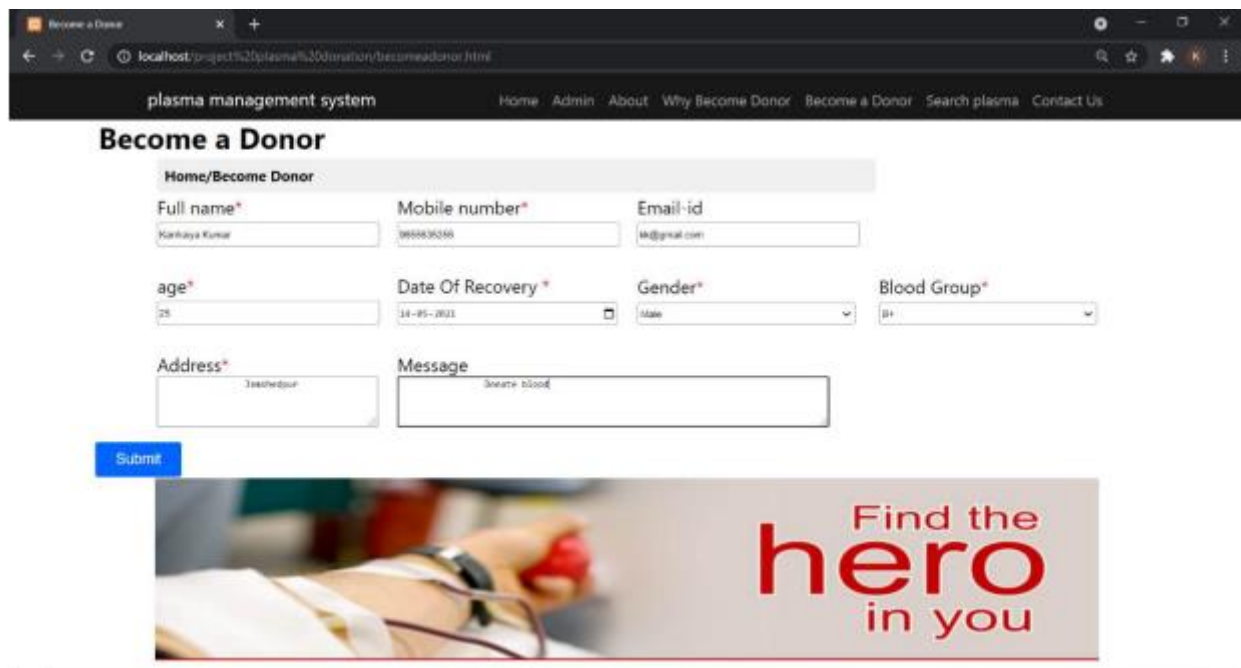

The screenshot shows a web browser window with the URL `localhost/wsp/%20project/project/%20plasma/%20donation/check.html`. The page title is "ELIGIBILITY CRITERIA". The form contains the following sections and questions:

- HAVE YOU SUFFERED FROM COVID-19?**
☒ Yes ☐ No
- AGE**
☐ Less than 18 ☒ More than 18
- WEIGHT**
☐ Less than 50kgs ☒ More than 50kgs
- Was your COVID-19 diagnosis confirmed by a lab test?**
☒ Yes ☐ No
- Do you currently have symptoms?**
☐ Yes ☒ No
- Has it been at least 14 days since the last day of your symptoms (COVID-19 symptoms include fever, cough and shortness of breath)?**
☒ Yes ☐ No
- Have you had a follow up test that was negative for COVID-19 or shows you no longer have COVID-19?**
☒ Yes ☐ No

A green "submit" button is located at the bottom of the form.

Become a Donor:

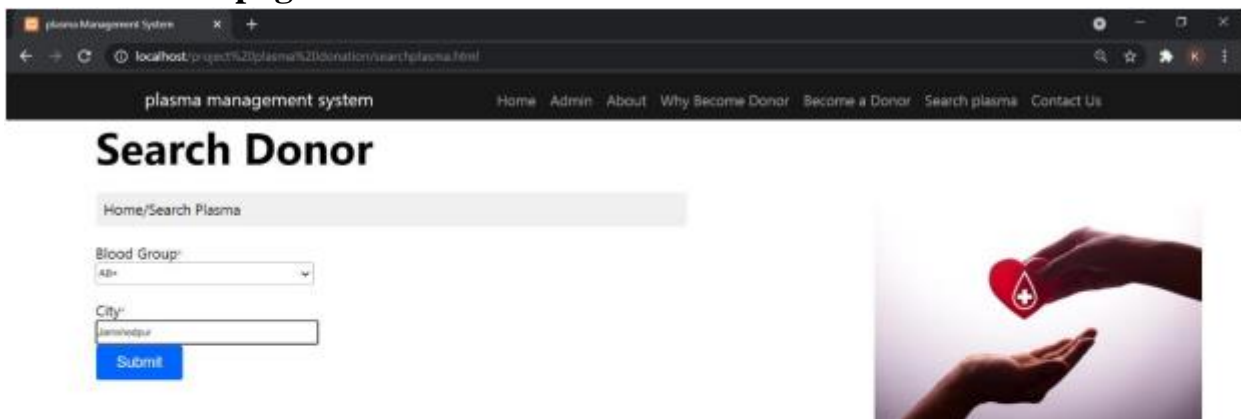

The screenshot shows a web browser window with the URL `localhost/project/%20plasma/%20donation/becomeadonor.html`. The page title is "plasma management system". The form contains the following fields and sections:

- Home/Become Donor**
- Full name***:
- Mobile number***:
- Email-id**:
- age***:
- Date Of Recovery ***:
- Gender***:
- Blood Group***:
- Address***:
- Message**:
- Submit** button

Below the form is a banner image showing a person's arm with a blood donation needle. The text "Find the hero in you" is overlaid on the right side of the banner.

People who have fully recovered from COVID-19 for at least two weeks are encouraged to consider donating plasma, which may help save the lives of other patients. COVID-19 convalescent plasma must only be collected from recovered individuals if they are eligible to donate blood. Individuals must have had a prior diagnosis of COVID-19 documented by a laboratory test and meet other donor qualifications. Individuals must have complete resolution of symptoms for at least 14 days prior to donation. A negative lab test for active COVID-19 disease is not necessary to qualify for donation. Plasma helps replace lost fluids and other blood products in burn victims, and more.

COCLUSION AND FUTURE ENHANCEMENTS:

With the theoretical inclination of our syllabus it becomes very essential to take the at most advantage of any opportunity of gaining practical experience that comes along. The building blocks of this Major Project “PLASMA Management System” was one of these opportunities. It gave us the requisite practical knowledge to supplement the already taught theoretical concepts thus making us more competent as a computer engineer. The project from a personal point of view also helped us in understanding the following aspects of project development:

- The planning that goes into implementing a project.
- The importance of proper planning and an organized methodology.
- The key element of team spirit and co-ordination in a successful project.

This dissertation work has shown the new working concept of plasma management system . Information and computer technology is very popular in blood banks for its potentials in working efficiency as well as service quality we just provide a new facilities for all plama management as well as for seeker . It plays a vital role in this new concept . The main objective behind this concept is that ,in many places blood bank may not have a good facilities for storing a blood unit in bank for large time period , but with the help of this new concept blood bank have to provide a plasma to any time and any situation to seeker apart from that seeker is also able a call the donor for plasma in a very serious condition of patient .

In Future Enhancements, admin could ask for the proof for recovery from Covid-19 and other valid proofs like Aadhar Card to check the age and other details, so that admin could verify and assign a login.
